Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller (6,332,308 B1), in view of Ko (6,066,195).

Miller discloses a self-contained, portable workstation (A) comprising a vacuum source (50) for providing air evacuation from the work station (A) via a vacuum hose (40) wherein the vacuum hose (40) has a first end operatively interconnected to the vacuum source (50) and a second end operatively interconnected onto a work platform (20), and the work platform (20), a replaceable air filter system (46) therein and in open communication with a filtered air outlet located on the housing (col. 5, lines 33-42), and a housing mounted on rollers (8). Miller also discloses the vacuum hose being adjustable in length and easily manipulated into a position of choice (see 40 in Fig. 1), and the vacuum source (50) contained within a housing (col. 5, lines 20-22). Claims 1-14 differ from the disclosure of Miller in that the work platform formed from transparent plates. Ko discloses a work platform or housing (12) for filters wherein the housing (12) is fabricated of a transparent material (col. 3, line 58 through col. 4, line 10). It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide the wall of the platform (20) of Miller with transparent material as

taught by Ko so that a user can visually estimate the amount of dust and particulates that has accumulated in the duct network (see col. 4, lines 5-7).

Regarding to the limitations of a "handle" of claim 6 or a "mirror" of claim 13 or a "light source" of claim 14, these are only accessories or changes of part and it is well settled that mere change of shape without affecting the function of the part would have been an obvious design modification.
